

Ideation Phase

Brainstorm & Idea Prioritization Template

Date	31 Jan 2026
Team ID	LTVIP2026TMIDS24920
Project Name	Strategic Product Placement Analysis: Unveiling Sales Impact with Tableau Visualization
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

This brainstorming and idea prioritization template is designed to generate and organize solutions for the key problem statement:

"How might we create a centralized, visual, and interactive Tableau solution that helps retail managers and analysts understand the impact of product placement on sales?"

By involving all four team members—each with different roles and perspectives—we collected diverse ideas ranging from data visualization techniques to user experience improvements and system automation. These ideas were then grouped into common themes such as **Interactive Visualization, Analytics Tools, Performance Monitoring, and Stakeholder Access**.

To ensure efficient execution, the ideas were prioritized into three levels:

- **High Priority** for immediate implementation with high impact,
- **Medium Priority** for enhancements that add value,
- **Low Priority** for future improvements or nice-to-have feature

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Template

Brainstorm & idea prioritization

In the *ToyCraft Tales* project, the team brainstormed ideas on sales, inventory, and customer trends, then prioritized them using Mural's Impact vs Effort matrix. Quick wins like top-selling toys and age-based sales were selected for early Tableau dashboards, while deeper insights like profit margins were planned for later. This kept the focus on high-impact, easy-to-build visuals.

- 🕒 10 minutes to prepare
- 👥 1 hour to collaborate
- 👤 2-8 people recommended

🔹

Before you collaborate

Align on project goals, understand the available toy data, and define target users. Make sure everyone is ready to brainstorm insights that support better decisions through Tableau

🕒 10 minutes

A

Team gathering

Bring together toy designers, data analysts, sales, and product managers to align on goals and explore insights that improve toy production and sales using Tableau

B

Set the goal

Use Tableau to analyze toy sales, production, and customer trends—helping the team make smarter decisions about what toys to produce, where to sell, and how to improve performance.

C

Learn how to use the facilitation tools

Familiarize the team with tools like **Mural** for idea sharing and **Tableau** for visualizing toy data. These tools help structure collaboration and turn toy sales and production insights into clear, actionable dashboards.

1

Define your problem statement

Which toy categories are underperforming across branches, and how can we optimize production and inventory using Tableau insights?

🕒 5 minutes

PROBLEM

How might we identify underperforming toy categories to improve production and inventory planning?

Key rules of brainstorming

To run a smooth and productive session

- 👤 Stay in topic.
- 💡 Encourage wild ideas.
- ⏸️ Defer judgment.
- 👂 Listen to others.
- 🗣️ Go for volume.
- 👁️ If possible, be visual

Step-2: Brainstorm, Idea Listing and Grouping

Step-2: Brainstorm, Idea Listing and Grouping

Arja Raghuvver
Write down any ideas that come to mind that address your problem statement.
10 minutes

Narshha

- Create heat maps to visualize top performing products by region.
- Build a filterable Tableau dashboard by store, category, and time.
- Integrate sales trend lines before and after placement changes.
- Highlight underperforming SKU's with color-coded alerts.

Kartteek

- Include comparison benchmark data for placement performance.
- Add a summary card showing key performance metrics (KPIs).
- Design a "What-If" scenarios tool in Tableau to simulate placement changes.
- Embed a recommendation engine based on sales insights.

Balaji

- Use interactive tooltips to show product placement info on hover.
- Add icon-based visuals to improve user experience.
- Design a dashboard with clean navigation tabs (Sales, Placement, Trends).
- Apply conditional formatting to highlight trends visually.

Dhavana

- Schedule automatic data refreshes for real-time dashboards.
- Add a feedback form action dashboard for user suggestions.
- Set up user access levels for different feature sets (sales, marketing, exec).
- Link Tableau reports to email updates for stakeholders.

Group Ideas

Tune into sharing your ideas while clustering similar or related notes as you go. Once all sticky notes have been grouped, give each cluster a summary label. If a cluster is larger than the sticky notes, try and see if you can break it up into smaller sub-groups.
20 minutes

Interactive Visualization & UX

- Create heat maps to visualize top performing products by region.
- Use interactive tooltips to show product placement info on hover.
- Copy and paste data from Tableau to other tools like Excel.
- Apply conditional formatting to highlight trends visually.
- Add icon-based visuals to improve user experience.

Performance Monitoring

- Include comparison benchmark data for placement performance.
- Embed a recommendation engine based on sales insights.
- Design a "What-If" scenarios tool in Tableau to simulate placement changes.

Stakeholder Access & Feedback

- Link Tableau reports to email updates for stakeholders.
- Add a feedback form action dashboard for user suggestions.
- Set up user access levels for different feature sets (sales, marketing, exec).

Analytics Features & Tools

- Build a filterable Tableau dashboard by store, category, and time.
- Integrate sales trend lines before and after placement changes.
- Highlight underperforming SKU's with color-coded alerts.
- Apply conditional formatting to highlight trends visually.

Step-3: Idea Prioritization

Prioritize

Your team should all be on the same page about what's important moving forward. Place your ideas on this grid to determine which ideas are important and which are feasible.
20 minutes

TIP
Participants can use their cursors to point at where sticky notes should go on the grid. The facilitator can confirm the spot by using the **H** key on the keyboard.

Importance
If each of these tasks could get done without any difficulty or cost, which would have the most positive impact?

Feasibility
Regardless of their importance, which tasks are more feasible than others? (Cost, time, effort, complexity, etc.)

- Clean and preprocess the downloaded dataset
- Create some visualizations so that the customers can easily understand the underlying patterns.
- Story telling and recommendations: Create tableau story with dashboards for each scenario and give some strategic recommendations based on trends.
- Add a feedback form action dashboard for user suggestions.
